WHY WAIT AROUND FOR THE 'NEXT BIG THING' IN SEED DISC OPENERS?

**RANGELINE'S
MAXIMUM DUTY
SEED OPENER
ASSEMBLIES ARE
ALREADY HERE!**

Our Field Ready Guarantee

No more wasted time weeding out defective blades - we GUARANTEE our blades will run true.

- Longer Bevel and 'Stay Sharp' Edge
- Peer Bearings
- Reinforced Heavy Duty 5mm Housing
- 5/16" Rivets
- Fits John Deere XP

25% longer wearlife than the leading competitor

EVERY SINGLE opener is laser tested to industry-leading tolerances of less than .050/.127mm axial / .060/1.52mm radial - or it doesn't leave the warehouse

Eliminate downtime and maximize yields

RangeLine
GROUP

OTICO **FARMFLEX®** GAUGE WHEEL ASSEMBLIES

OTICO FARMFLEX® GAUGE WHEELS are the industry leaders in agronomic performance and wear resistance. Their wheel technology and rim & bearing design is unmatched for strength and efficiency.

THE FARMFLEX® CONCEPT

FARMFLEX GAUGE WHEELS **UNMATCHED RELIABILITY**

Puncture-Proof due to the semi-hollow structure

OTICO tires, wheels and rollers are all based on FARMFLEX® technology.

The FARMFLEX® concept is based on the use of semi-hollow tires, that offer major benefits in farming applications.

SPOKED & SOLID GAUGE WHEELS AVAILABLE

The semi-hollow structure of these tires makes OTICO products especially effective, regardless of the conditions in which they operate. FARMFLEX® is a registered trademark owned by OTICO since 1995.

SELF-CLEANING: Specific rubber formulations and wheel shapes facilitate self-cleaning.

SHOCK ABSORPTION: Rubber shock absorption means more consistent sowing and depth control. Rims and bearings last longer due to better shock absorption.

QUALITY: Very high quality rubber specially designed to meet increasing demands for longevity.

RYCO manufactures high quality, abrasion resistant and accredited hydraulic hoses covering a broad range of international standards.

RYCO manufactures hydraulic hose couplings in many different styles and sizes, with a wide range of thread and connection types to meet global demand and industry specifications.

YOUR BEST HARVEST AWAITS WITH

KONDEX KX7 CONCAVES

KX7 CONCAVE AVG CROP LOSS: .25%
OEM CONCAVE AVG CROP LOSS: 2%

**Available for John Deere, Case-IH,
Massey Ferguson, Challenger, & Gleaners**

CONTACT US TODAY FOR A CUSTOM QUOTE: 585.270.8047

- 10-15% More Productivity
- 15-20% Greater Capacity
- Improved Threshing
- Less Grain Loss & Plugging

IMPROVED PRODUCTIVITY

KX7 Concaves improve your productivity by increasing your combine's capacity. Our MaxThresh™ and MaxRound™ box inserts feature angled threshing and separation bars to meet the crop head on. Compared to traditional concaves, these features improve harvest capacity without compromising the grain sample or rotor loss.

GREATER CUSTOMIZATION

No one knows your crops, fields, or environment like you, which is why KX7 concaves allow you to customize the configuration of your threshing cylinder with our MaxThresh™ and MaxRound™ box inserts. This flexibility gives you control of your harvest, while our smaller width frames give you twice as many customization options.

PRECISION PRODUCT

KX7 Concaves are American made and robotically manufactured to exceed OEM quality standards. Our welds are individually inspected by the American Welding Society qualified welders, while visual and robotic testing ensures product consistency and dimensional tolerances are met. The heat treating on the KX7's MaxThresh™ and MaxRound™ bars you'll benefit from a longer lasting product.

KONDEX STRAW CLAW® CHOPPER BLADES

AVAILABLE FROM RANGELINE GROUP!

BEST RESIDUE MANAGEMENT AND CUT QUALITY.

Only Straw Claw's® patented design offers a controlled wear pattern to retain blade sharpness and premium cut quality while also delivering smaller, more consistent crop particles. This leads to an evenly distributed crop mat, optimal residue management, and longer maintained rotor balance.

STAY SHARP DESIGN

A sharp Knife is an efficient Knife. Straw Claw® features a self-serrating design that sharpens as it cuts. Gained from our Tungstrong™ laser cladding enhancement that directs the wear pattern of the blade edge this design also allows for easier cutting and a reduction in fuel consumption.

IMPROVED RESIDUE MANAGEMENT

The performance of your chopper blades is a critical factor in residue management. Side-by-side testing prove Straw Claw® creates smaller, more consistent particles than traditional blades. This produces a thinner, more evenly distributed crop mat that maximizes ground contact for the fastest microbial breakdown.

ACCLAIMED INNOVATION

Konex Straw Claw® chopper blades earned a 2018 AE50 award as one of the most innovative agricultural products of the year. Granted by the American Society of Agricultural and Biological Engineers (ASABE), This award celebrates the engineering developments that increase efficiency and enhance quality.

EFFICIENT & EFFECTIVE PATENTED DESIGN.

STRAW CLAW
CHOPPER BLADES

STRAW CLAW® VS. TRADITIONAL

- Optimized residue size and distribution
- Maintains Balance Longer
- Extended Product Life
- Sustains blade sharpness
- Consistent performance throughout the life of blade

Gain the upper hand on cut quality.

CRARY WIND SYSTEMS

MAXIMIZE YOUR CROPS POTENTIAL WITH A CRARY® WIND SYSTEM (CWS)

FEATURES

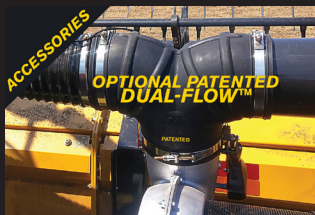

8 inch Crary fan with rotary screen

8 inch aluminum tube

36 inch and 42 inch long, alternating drop tubes, with added gussets for extra strength

Fits most major brands of headers

Powder coat paint for extra durability and helps reduce troublesome sun glare

SECTIONAL MANIFOLDS

HEAVY DUTY SUPPORT

SELF-CONTAINED FAN ASSEMBLY

FASTER GROUND SPEEDS

WORKS IN A VARIETY OF CROPS

LONG LASTING

SERIES II GEARBOX™

- Simplified Design
- Reduced weight, sound and operating temperature
- Improved field serviceability
- Increased power transmission allows Crary to move more air with a single fan

CRARY
INDUSTRIES

TRUSTED BY FARMERS

"I forgot how nice the CWS fed the crop into the combine until I was given the opportunity to drive a new combine and head with just a conventional reel. The beans fed into our old combine evenly, but piled and bunched on the new combine."

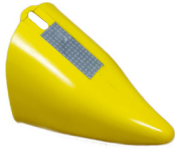

-Ron L. Havelock, IA

AMAZONE CEUS

CALL (585) 270-8047.

- In just one pass, achieve shallow cutting and deeply loosen soil tillage
- Independent operation is possible with either just the disc segment or with the tine segment
- High maneuverability on the headland and narrow transport for road control
- Maximum flow through due to optimally designed row spacing of the tine section
- Infinitely-variable mechanical depth adjustment

AMAZONE SPREADERS

- Precise spread patterns, wind control, argus twin
- Maximum work rates at application rates of 650 kg/min and operational speeds of up to 30 km/h
- ProfisPro on-line weighing system – for constant control of the application rate
- Fill management with the external fill level indicator lights ensures the quick and accurate loading by just one person

SPEEDTILLERS

21', 27', 31', 41' Speedtillers in stock for the season.

- Speedtillers are a high-performing dual purpose disc-tillage machine used for soil conditioning with superior penetration.
- Ideal for high-speed disc tillage, it can efficiently cut, size and incorporate high levels of crop residue increasing the carbon content in your soil.
- Soil erosion from wind and water is drastically reduced by the Speedtiller's excellent incorporation ability.
- Designed and engineered for farmers, by farmers. We understand the need for reliable, powerful machinery that can minimize downtime and increase productivity on your farm.
- The Speedtiller® is a highly efficient machine that penetrates soil at the ideal depth.
- Our high-speed disc tilling machine allows for better trash flow and incorporation, while simultaneously lifting the soil for less compaction. This effectively improves the quality of your soil and helps maximise crop yields.
- The Speedtiller® handles heavy residue with ease, moves the dirt of an offset, and is an excellent finishing tool for levelling and one-pass seedbed preparation.
